Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                            -:- FUNCTION: Receptor for melanin-concentrating hormone, coupled to proteins that activate phosphoinositide hydrolysis.
-:- SUBCELLULAR LOCATION: Integral membrane protein.
-:- TISSUE SPECIFICITY: Specifically expressed in the brain, with highest levels in creebral cortex, hippocampus and amygdala. No expression detected in the cerebellum, thalamus or hypothalamus.
-:- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                             "Molecular characterization of a novel melanin-concentrating hormone receptor: evidence of its expression in lateral hypothalamus."; Submitted (MAR-2001) to the EMBL/GenBank/DDBJ databases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    6 (POTENTIAL).

specific gene expression.",
Submitted (MAY-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for melanin-concentrating hormone, coupled to proteins that activate phosphoinositide hydrolysis.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUB SPECIFICITY: Specifically expressed in the brain with highest levels in cerebral cortex, hippocampus and hypothalamus, and lower levels in caudate nucleus, putamen and thalamus.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A. Fried S., O'Neill K., Hawes B.E.; "Cloning and characterization of rhesus monkey MCH-R1 and MCH-R2."; Submitted (FEB-2002) to the EMBL/GenBank/DDBJ databases.

"Molecular characterization of a novel melanin-concentrating hormone receptor: evidence of its expression in lateral hypothalamus.";
Submitted (MAR-2001) to the EMBL/GenBank/DBJ databases.
-!-FUNCTION: Receptor for melanin-concentrating hormone, coupled to G proteins that activate phosphoinositide hydrolysis.
-!-SUBCELLULAR LOCATION: Integral membrane protein.
-!-SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-0CT-2003 (Rel. 42, Created)

-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
-!- CAUTION: It is uncertain whether Met-1 or Met-71 is the initiator.

"Submitted (FEB-2002) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Receptor for melanin-concentrating hormone, coupled to both G proteins that inhibit adenylyl cyclase and G proteins that activate phosphoinositide hydrollysis (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

"Generation and initial analysis of more than 15,000 full-length human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Melanin-concentrating hormone is the cognate ligand for the orphan G-protein-coupled receptor SLC-1.";

Nature 400.261-265(1999).

-I- FUNCTION: Receptor for melanin-concentrating hormone, coupled to both G proteins that inhibit adenyly! cyclase and G proteins that activate phosphoinositide hydrolysis.

-I- SUBCELULAR LOCATION: Integral membrane protein.
-I- TISSUE SPECIFICITY: Highest level in brain, particularly in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCE OF 77-422 FROM N.A. MEDILINE: JOHNSON M.P., Lynch K.R., Kolakowski L.F. Jr., Jung B977118; Kolakowski L.F. Pharmacol. 45:417-427(1994).

FORWING: Receptor for somatostatin-28.", Freeptor is mediated by G proteins which inhibit adenylyl cyclase. Freeptor is mediated by G proteins which inhibit adenylyl cyclase. SUBCELLULAR LOCATION: Integral membrane protein.

FINISUE SPECIFICITY: Prominent in the pituitary and small intestine. Low levels in islets and spleen. Not detected in kidney, pancreas, cerebellum, or cortex.

FINISATTY: Belongs to family 1 of G-protein coupled receptors.

"Isolation and characterization of the gene encoding the type 5 mouse (Mus musculus) somatostatin receptor (msst5).";
                                                                                                                                                                                                                                                                                                                       Baumeister H., Roosterman D., Schafer J., Kreuzer O., Meyerhof W., Submitted (DEC-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for somatostatin-28. The activity of this receptor is mediated by G proteins which inhibit adenylyl cyclase.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                          SEQUENCE FROM N.A. STRAIN=EALB/c; IISSUE=Liver; Gordon D.F., Woodmansee W.W., Wood W.M., Knauf H., James R.A.; Submitted (OCT-1997) to the EMBL/GenBank/DDBJ databases.

C Biol. Chem. 275:9557-9562(2000).
C FUNCTION: Receptor for somatostatin with higher affinity for somatostatin-14 than -28. This receptor is coupled via pertussis commander of adenylyl cyclase. In addition is stimulates phosphotyrosine phospharase and Na(+)/H(+) exchanger via pertussis toxin insensitive G proteins.
C SUBUNIT: Interacts with SKB1.
C SUBUNIT: Interacts with SKB1.
C SUBUNIT: Fetal kidney, fetal liver, and adult pancreas, brain, lung, jejunum and stomach.
C SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

  Proc. Natl. Acad. Sci. U.S.A. 89:251-255(1992).

-!- FUNCTION: Receptor for somatostatin with higher affinity for somatostatin with higher affinity for somatostatin-14 than -28. This receptor is coupled via pertussis toxin sensitive G proteins to inhibition of ademylyl cyclase. In addition it stimulates phosphotyrosine phosphatase and Na(+)/H(+) exchanger via pertussis toxin insensitive G proteins.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICTTY: Johnum and stomach.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CYTOPLASMIC (POTENTIAL).

This receptor is coupled to sphosphotyrosine phosphatase and Na(+)/H(+) exchanger via pertussis toxin insensitive G proteins.
SUBCELDIAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Brain, pituitary, islet, jejunum, stomach,
                                                                                                                       Eukaryota, Metazoa, Chordata, Craniata, Vertebrata; Euteleostomi;

Natl. Acad. Sci. U.S.A. 89:10267-10271(1992).
-!- FUNCTION: Receptor for somatostatins-14 and -28. This receptor is coupled via pertussis toxin sensitive G proteins to inhibition of adenylary cyclass.
-!- SUBCELLULAR LOGATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Densely expressed in cerebellum and in moderate levels in the amygdala, cortex, striatum, spleen, liver,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       expression pattern with that of a somatostatin-14 receptor in rat
